

simple as the usage of light or dark mode give a good indication of each user's urge to customise their experience when using their smartphone.

That said, these changes are very rudimentary in the sense that anyone in the world could replicate them. Hence, you need to make your OnePlus 9 stand out from the other OnePlus 9s. In the good old days, since Android wasn't as flexible and open to changes as it is now, people would just install a new ROM on their phones. In simpler terms, they would just change the whole operating system (sort of) on their phones just to get the customisability they wanted. But somewhere along the lines of phones becoming more mainstream, the customisation culture has faded away.

With this FastTrack, we're bringing back those days. We've compiled the most comprehensive and thorough list of customisations and modifications that any power user could possibly dream about. From live wallpapers to launchers, icon packs to widgets, notifications to volume rocker mods, and so much more. Whether you are new to the modding scene or have been in and out of it from time to time or are an old school pro, there's something in this edition of FastTrack for everyone. There will be certain hitches with some of the more advanced tweaks, but we've provided as thorough instructions as possible to follow. But if you were to hit a snag despite that, don't worry because the internet has you covered. Online forums may have disappeared from the mainstream eye, but it has always been the ever-present guide for all modders time and time again.

It's important to focus on your exact requirements. There is no end to the sheer amount of customisation possible, and anyone could sink hours after hours into every little tweak. Being time conscious and setting a goal is what helps the most. Alternatively, if you have a weekend to burn, and I'm sure most of us do with yet another lockdown, then go hog wild with everything. Happy modding!
