

sending websites directly to your PC but requires access to Cometin Cloud, a paid service.

Cometin is a swiss army knife of customisations for all non-root users and is well packaged into just one app. However, its functionality breaks with certain Xiaomi phones. The developer actively takes in user feedback and adds new features according to users demands. They also maintain an active community on telegram.

Quick Tiles

Quick Tiles is an app that allows you to add quick tiles in the notification tiles drawer easily. One of the most powerful apps enables users to add quick tiles with such simplicity, the only caveat being that it's not available on the Google Play Store. Users can download it from F-droid and quickly add more tiles in the notification drawer after installation. Adding new quick tiles is as simple as flipping a toggle button. However, some other features such as toggling USB debugging or turning off heads-up notifications require users to run some ADB shell commands on their PC.

Buzzkill Notifications

Buzzkill is a set of tools that helps you manage your notifications. Users may define rules that tell the app when to activate notifications and what to do with them. Buzzkill is entirely free of ads and all its data is stored on your phone. However, that comes with a price tag of ₹100.

Buzzkill comes with its own presets of rules to give you an idea of how to make your own rules. It comes with a versatile set of options ranging from switching off silent mode on your phone to triggering Tasker events. If you set up buzzkill right, it can make your life easier and increase productivity.

Buzzkill also gives the users the history of their notifications and how Buzzkill acted on it for the past seven days. It also provides tutorials on filtering notifications and triggering Tasker events. It has a unique interface
