

However, it does come with a host of user-generated templates to make it easier for the users to set up their own macros.

SplitScreen Launcher

Split Screen, while being a very powerful feature capable of boosting productivity immensely for most users, it is seldom used. This may be tied to the fact that setting up a split-screen on most phones is a janky affair at best. Enter SplitScreen Launcher. This app lets you choose two apps that you want to use in split-screen more frequently

and set up a shortcut on the home screen to launch them in split-screen mode.

The app is free and open-source, and does what it says without any extra bells and whistles and also does not ship with any advertisements of any sort. However, it is still in early access so not all features might be polished.

DarQ

Dark mode has been all the rage for quite a few years now, yet there is no native dark mode in so many apps. With so many companies skipping out on dark mode, enthusiasts had to develop a solution to force apps to display in dark mode. DarQ is an app that forces dark mode per-app basis regardless of whether it supports it or not. However, to achieve such a feat, DarQ requires ADB privileges via your PC or Shizuku to achieve such a feat.

DarQ can also automatically change between light and dark modes based on the sent and sunrise times making it a very appealing solution for system-wide dark mode.
