

GIFs, stickers and memes. Your average keyboard will get you a standard package of all of these, but why settle for that when you can have much more? Third party keyboards are where companies innovate.

Swiftkey

Possibly the first keyboard to bring flow type to Android and iOS, Swiftkey is an old school classic. Developed by Microsoft, it's gotten every feature a modern third party keyboard app could have, and then some more.

Right off the bat, installing the app will present a default clean looking dark keyboard. You have the optionality to change up the theme, and there are several presets to choose from. However, if you so wish, you can customise it specifically to your desire, by selecting the background colour or image and the opacity of the image.

Closely related to the look is the feel of the typing experience, and this is set in the Typing section. There are toggles for autocorrect, auto capitalisation, quick period on double space, and possibly the coolest of them all, dragging on the space bar to get cursor control. There is a nice quality of life feature in this section which showcases your typing stats, and how flow type has helped your typing experience.

Given it is a Microsoft app, there is functionality to integrate this with Microsoft's To Do app and quickly add tasks while texting. Along with this, there is a nice clipboard feature, tracking your last 24 hours of copied text, and even allowing you to pin stuff permanently for quick access. This comes really handy in filling out that address form for the 50th time on government sites quickly.

Finally, there are several
