

for Camera 2 API. We won't get into the nitty gritty about Camera 2 API but if you want to check it's availability on your phone, just install Camera2API Probe from the Play Store.

Download and install the app from the Play Store. Open it and you'll see a ton of information about your device's camera and hardware. The only information that you'll need is in the "Hardware Support Level" row. If you find a green check mark on the "Level_3" option, you are good to go.

And that's pretty much it. If your phone meets the above two prerequisites then you're good to go.

Finding the correct APK

Now, since GCam is Google's property and is meant to work on ONLY Pixel devices, Google obviously hasn't listed it on the Play Store and made it available for everyone. Essentially, you'll be using a modded version of the original GCam taken from a Pixel device modded to fit and work with your device.

Usually, you'd have to scour the internet to find the correct version which works with your device but thankfully, some really good guys at XDA Developers have done that job for us. Head on over to this link → <https://dgit.in/gcam/> to find the "GCam Heaven". Here, you'll find GCams for almost every phone

List of Devices that have known working Google Camera Ports			
This article lists devices from various OEMs that have at least one working Google Camera Port. We tried to find the most stable and user-endorsed versions. There may be "better" versions available, but the ports listed here should work for most people. PLEASE SEND US A TIP IF YOU THINK A LINK SHOULD BE UPDATED.			
Send us a tip			
Note that the devices listed below are sorted alphabetically for their name. Some of the linked threads may not be from the corresponding device forum. This is not a mistake, as many of the ports work on multiple devices. We simply linked to a thread where you can download the APK.
