

We're using Files By Google as our file manager here but you can use the default file manager or even any other file manager of your choice. The steps for all will be the same. Now, tap on the APK and you'll get this warning.

This warning is a common one since your phone is trying to protect itself from unknown apps. You see, since all the apps that you install are from Play Store and almost all the apps there are checked by Google for malicious code or malware, you don't need to worry about accidentally installing something malicious on your phone. But since you are installing an app here without Google as a middle party, your phone gives you a warning that this app might be harmful. But since we're downloading this from a trusted source, we do not need to worry about getting our device infected. Also, we'd advise you too to be safe while installing APKs. If you're installing an APK, make sure it's from a trusted source like XDA, APKMirror, etc.

Once you get the warning, tap on “Settings” button and you'll be taken to the page shown in the image:-

From here, simply check the option for “Allow apps from this source”. After you do this, you may or may not get a prompt to install the GCam app like this:

If you don't then just go back to your file manager and tap on the APK again. You'll get the above prompt. Now, just tap on install and
