

wait for the installation to be finished. That's it. That's all you had to do to install the APK on your device. You'll find the GCam listed in your app drawer. Open the app, grant the required permissions and shoot some magical pictures!

Dialer

Nowaday, phones are used for a ton of different tasks. From video editing to gaming to watching 4K HDR videos, most phones today can handle it. All these graphical / CPU intensive tasks are handled like a breeze by some high-end phones and there are a lot of alternatives to the softwares being used too. Say, you're doing video-editing from your phone, you can use Kinemaster, InShot, and a ton of different apps which will ultimately get the job done for you. But we shouldn't forget that phones were initially made to call people. To connect with people and well, that's pretty much overlooked in some phones nowadays.

We're talking about the default dialer app. Sure, it can handle incoming calls and outgoing calls but some default dialers nowadays just don't look as good or even perform as good. If you're looking to replace your default dialer with something a bit more modern and fresh, well, this chapter is for you.

How to set an app as your default dialer

Before we head over to the list, let us show you how you can set an app as your default dialer in your phone. This will open the app by default whenever you receive a call or you want to make one. Firstly, head on over to Settings and search for "Default Apps". Tap on the first result and you should see a menu like this:

Now, go to the option where it says "Phone App" or "Dialer App" (in some phones) and then select the default dialer of your choice.
