

Simple Dialer

This is probably the most safe and trustworthy app on this list. Simple Dialer just does what it says. Makes phone calls. It is free and open-source and sports a material design with a dark theme.

First, install the app from the Play Store and set it as your default dialer. In case you forget to do that, the app will prompt you to set it as your default dialer when you open it up for the first time. The app will require the basic permissions which can be seen in the above screenshot.

Honestly, that's the best thing about this app and we really liked it. The app requires no extra permission to function. Just the Contacts, Microphone and Call Logs permission is required and the app is good to go.

Coming to the customisation that this app offers, it is practically none. Yes, you read that right – you can do next to zero customisation on this app. The only way that you can customise it is to buy the premium version of the app
