

ised with the UI of the app, let's get customising and trust us, there is a LOT to customise here. Firstly, on the top-right of your screen, there will be three dots. Tap them and go to the settings. You should see this screen.

There are two major menus that you should focus on to customise this app. The "General Settings" and "StartView Customise". The latter will allow you to change the order of the tabs in the bottom as well as give you the option to add / delete them. The former is where all the magic happens.

Go to the General Settings and you will find a plethora of check boxes. We want to focus on the "Appearance" section of the menu. Here, you can set the general theme of the app – which will basically decide the accent colour for the app, give a custom background which will be persistent through all the menus, change text size and text colour too. Here is what the app looks like after applying a theme and a custom wallpaper.

All in all, Quick Dialer is a pretty good app sporting a good amount of customisability with it. If it weren't for the ads and the broken english, this app would've been at the top of our list.

Phone By Google

If you just want a replacement for your stock dialer and you don't have this one pre-installed in your phone, you should consider checking this out. This is a dialer app made by Google themselves and this is what ships with stock Android phones, OnePlus Phones and Pixel Devices nowadays. Of course, since it is made by Google, the UI is fluent, minimal and ad-free.

You can install the app via two ways. Either through the Play Store or via
