

APK Mirror. We're suggesting APK Mirror because we couldn't get the app working on some of our devices through the Play Store and hence we had to sideload it. Anyways, after you've downloaded and installed the app, set it as your default dialer. Once you open the app, you'll see three tabs at the bottom of your screen which are for Favourites, Recents and Contacts and a persistent button at the bottom right for the Dialer.

Since it's an app made by Google, there really isn't much to talk about in the customisation department. The only thing that you can change in the app is the theme (Light / Dark) and that's pretty much it. But, the good thing is that you'll get Google's security, call recording and integration in the "Google" ecosystem with this app.

Dialer by Goodwy

Dialer by Goodwy is another minimal Dialer app which breaks out of the typical "dialer theme" by rearranging stuff a bit. We chose this app because of two reasons. First being that the app has zero ads and second for it's fluid UI.

Once you install the app and set it as your default dialer app, open it. A really good thing about this app is the AMOLED Black theme that it provides. We personally dig that. You'll see the Favourites menu by default.

If you've been following all the screenshots above, you'll know that usually, in all the dialer apps, menus like "Favourites", "Speed-Dial", etc. are placed on the bottom of the screen with little icons. Well, Dialer changes this by placing them on the top of the screen which kinda looks like the iOS design theme but we'll let it pass since it looks good. There is a persistent "Dialer"
