

you will need to buy the Pro version of the app which costs about 190 INR. this will unlock the colour picker and much more stuff too.

After selecting a theme, if you come back to the main Settings menu, you'll find a toggle for "Pure black night mode". Enabling this will make the dark more even darker by changing the background to pure black instead of the usual grey. For all the people with AMOLED screens, enabling this will make the app look really good and will save you some battery while it's at it.

The last thing we want to cover under customisations are the swipe gestures. If you're used to using the GMail app on your phone then you'll know how handy those swipe gestures can be. You can assign the left swipe and the right swipe to different actions and you won't go to their subsequent menus to perform those actions anymore. Well, QKSMS offers you the same functionality but with messages. In the Settings app, you'll find the option for "Swipe actions" under "General". Tap on it and you'll see what's on the leftmost picture here on your screen :-

From this screen, you can customise what these swipe gestures do by tapping on them. You will get a list of actions that you can do and you will
