and go to Settings. Tap on the "Theme It!" button and see the magic unfold before you.

Hmmm, that was a bit anticlimactic. This menu just gives us the options to choose between a light theme and dark theme. Many apps just stop here. But Chomp takes the extra step. Press the "+" button on the top right corner and you'll be taken to a menu which covers all the three important aspects of this app. Conversation List, Conversation and Quick Reply. Tap on any one of them and you will see this :-

YOU CAN LITERALLY CUSTOMISE AND CHANGE EVERY ASPECT OF A WINDOW. Custom background? Sure! You want the Date to be a different colour from the rest of the window? Sure! You want to change the colour for incoming and outgoing messages? Why not! This app literally allows you to change everything. Quite literally. We cannot stress that fact enough. This menu will allow you to make a new theme that can be applied to the app. And if that functionality wasn't enough, if you come back to the "Theme It!" menu and tap the "Get More Themes" button, you'll be taken to a very long list of themes available for the app which users have made before. This comes in handy especially when you're just too lazy to change each and every little option of the app but you still want some degree of customisation over the default Light and Dark theme.
