

Pattern. Now, you'll see a menu like shown on the previous page :-

From here, you can either choose the presets or you can even define your own custom vibration pattern. This is going to come especially handy when you need to differentiate between different people who have texted you.

Look, we could really go on and on about this app since there are about 40-50 percent of things that we have left out. If you REALLY want to get into the nitty gritty of customising your SMS app we highly recommend that you check this app out. One thing to note here is that the Play Store description says that you will need to buy the Premium version of the app to remove all the ads but during our time with the app, we saw no ads.

Microsoft SMS Organiser

While all the other apps are racing to get the best customisation features, best privacy features, best interfaces, etc. Microsoft's SMS Organiser is playing in a different league altogether. You see, Microsoft took the sigma route and developed an algorithm which sorts all of our messages. How? Well, read on to find out.

Firstly, download and install the app from the Play Store and open it. It'll prompt you to set it as your default messaging app. Do that and you'll be taken to this screen.

If you've used and set up WhatsApp, you'll find this screen familiar. Yes, Microsoft decided to implement a full blown backup system for your SMS to Google Drive. If it detects any previous backups and will prompt you to restore chat backup if found. This feature comes in especially handy when you're changing phones and you have to transfer your SMS too. However, if you're setting the app up for the first time, you can just press the "Skip" button on the top right corner. Here's where the magic happens. You'll be taken to a screen where three numbers will start incrementing rapidly. Wait for sometime till they stop and look something like this:

Let us explain what those numbers are for. Microsoft is actually running it's algorithm on your mes-
