

sages and sorting them into three different categories. “Personal”, “Transactions” and “Promotions”. Before you start complaining about invasion of privacy here, Microsoft explicitly states that this algorithm is being run on your device – locally. This means that Microsoft isn’t uploading your data to their servers to sort the messages. It’s actually doing it on your device so that your data stays where it needs to

be. Anyways, after it’s done sorting the messages, a white “Get Started” button will appear. Tap on it and it’ll take you to the main interface of the app.

Here’s where the fun begins. If you observe here, the homepage will only consist of the messages with actual phone numbers, meaning – only chats. People who you actually talk to. On the bottom, you’ll see 4 tabs. Personal, Transactions, Promotions and Starred. Tapping on each of them will bring you messages from that respective category. Basically, Microsoft has taken your jumbled inbox full of all kinds of messages, sorted them and placed them in their own individual menus. This heavily declutters your inbox so that you can only focus on one category at a time. This also serves a very niche purpose of looking good. I.e. whenever you open your Messages app, you won’t be immediately bombarded with all the spam and promotional messages. They have their separate tab here and they have been kept there.

You’ll be really surprised by how accurate the algorithm is in sorting these messages. And if you thought that was it for the app, you’re wrong. We’re just getting started! If you go back to the Personal tab, you’ll see that on the top there are another 4 tabs. Messages, Reminders, Finance and Offers. You see, Microsoft doesn’t just stop at dividing your messages into three broad categories and call it a day. It further divides them into four categories mentioned above and all of them serve a unique purpose. If you go to the Reminders tab, you can set a reminder for a particular message. Say your boss has messaged you about completion of some work. You can just add a reminder to that particular message, give it an expiration date and time and you’ll be all set. To do this, after
