

12. To confirm the contents of the RegBack folder, type the following command and click Enter.

```
dir
```

The file sizes (SYSTEM, SOFTWARE, SAM, SECURITY, DEFAULT) should be comparable to those shown in the screenshot after running the dir command. If any of the files have a value of 0 kB, do not proceed because you will be unable to fix your Windows 10 installation and your device may cease booting.

13. To copy the files from the RegBack folder to the config folder, restore the Windows 10 Registry, and confirm, type the following command and click Enter and the Y key on each question.

```
copy * ..\*
```

14. Type 'Exit' to close the prompt.

The computer will reboot after you finish the procedures, and Windows 10 or 11 should start up normally. These steps should also work on older generation Windows operating systems after Windows 7. **d**
