

Improve Network Speeds

Ways to speed up your internet connection

Many of the registry tweaks on this list will entail design or aesthetic changes that will make Windows 10 feel slicker and nicer. However, there are a slew of registry tweaks that can boost your Internet speed.

You can increase your IRP Stack Size, activate TCP extensions, or increase the maximum number of ports available to various programmes trying to connect to your router if you're having troubles or experiencing packet loss.

IRPStackSize

IRPStackSize (I/O Request Packet Stack Size) is the number of 36-byte receive buffers that your computer can use at the same time. It enables your
