

to negotiate a receive window size with a server, allowing PCs to select up to 1 GB receive windows.

Navigate to the following location in your registry:

`\HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\Tcpip\Parameters`

On the right side of the registry editor, you should find `TCP1323Opts` as a “DWORD” value. (If you don’t have one, make one.) Change the value to “1” by right-clicking it.

MaxFreeTcbs

`MaxFreeTcbs` is a questionable value. It calculates how many active TCP connections your computer can manage at any given time depending on the amount of physical RAM available and the bandwidth performance of your computer.

Because of the large number of active connections talking to the computer at the same time, if the number is too great, your computer may not be able to correctly execute TCP transactions. You won’t be able to host or request as many connections if the number is too low. While the number is selected arbitrarily, you may want to increase it if your hardware or Internet connection improves.

To reach the location for the value, go to the following path in your registry:

`\HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\Tcpip\Parameters`

Create or update the variable “`MaxFreeTcbs`” and set the value to 65536. You can adjust this to a lower amount, such as 16000, if you’re running an older machine with lesser-performance hardware.

MaxUserPort

When a programme asks Windows to open a port, the operating system selects one from a range of 1024 to a maximum value known as “`MaxUserPort`.” TCP/UDP connections can be established across the Internet and within your local network using a port on your computer.

I could go into more detail, but let’s get this party started. 5000 is less than 65534, as we all know. What happens when you give programmes looking for a port more options? They find a port considerably faster than they would if there were only a few thousand options.

This value is set to 5000 by default in Windows, but you can change it to any number between 5000 and 65534.
