

To change the value of the freshly formed DWORD in the right-panel, double-click on it.

Fill in “1” in the “Value data” field on the next screen, then click “OK” to preserve your changes.

The lock screen on your computer should now be disabled thanks to the Registry Editor.

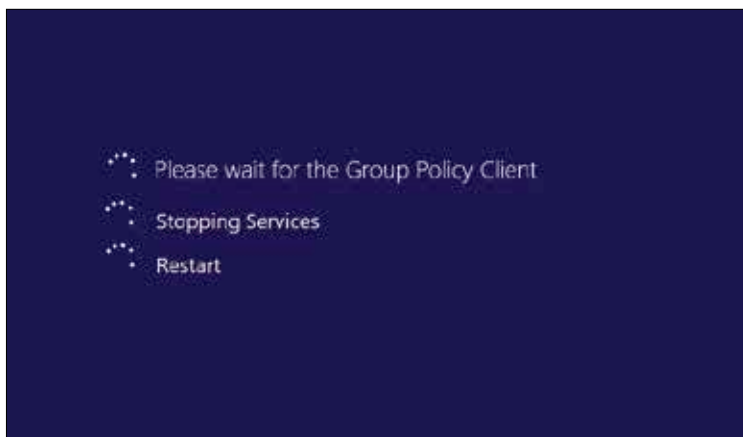

Show Detailed Information on Startup

If your PC is suffering slowdowns or crashes for no apparent reason, you should investigate the source of the problem. Setting the Windows 10 launch to “Verbose Mode” will provide you with a far more complete analysis of the processes taking place on your PC when you boot.

Go to the following registry key to activate it:

`HKEY_LOCAL_MACHINE\SOFTWARE\Wow6432Node\Microsoft\Windows\CurrentVersion\Policies\System`

Then, in the right-hand pane, right-click an empty spot and choose “New -> DWORD (32-bit) Value.” Give the value the name “VerboseStatus,” right-click it, select Modify, and enter 1 in the “Value data” box.

Verbose status messages enabled

Enable Last Active Click for Windows 10 Taskbar

The taskbar in Windows 10 groups all open windows of a given app under the same taskbar icon, which you then click to bring up thumbnails of all the open windows included inside. You must hold the Ctrl key while clicking
