

an open app in the taskbar to open the last active windows within that app.

This is useful, but you might prefer it if hitting the taskbar icon transported you directly to the last window you had open within the app, bypassing the thumbnail nonsense. Learn how to activate last active click in the Windows 10 Taskbar by following the steps below.

We recommend that you back up your registry since, while this method is safe, a mistaken registry edit can cause problems if you don't follow the instructions.

To begin, use the Win key to bring up the Start menu, then type regedit into the box and press Enter.

Once you're in the registry editor, type the following in the top address bar:

```
HKEY_CURRENT_USER\SOFTWARE\Microsoft\Windows\Current-
Version\Explorer\Advanced
```

Right-click an empty spot in the right pane, choose "New -> DWORD (32-bit) Value," and give it the name "LastActiveClick." Change the "Value data" to "1" by right-clicking your newly generated registry item. With a single click, your taskbar icons for open or minimised apps will now transport you to the last active window.

Disable Shake to Minimize

The "Aero Shake" feature in Windows 7 allows you to minimise windows by grabbing and "shaking" the one you want to remain open. You may not have noticed you had this option, but now that you are aware of it, you may not want it because it can sometimes reduce all of your windows without your permission.

You'll accomplish this using the Windows registry, and while following the steps is safe, it's always a good idea to back up your Windows 10 registry first.

To begin, press Win + R and type regedit in the box to launch the Registry Editor.

In the registry editor, go to

```
Computer\HKEY_CURRENT_USER\Software\Microsoft\Windows\
CurrentVersion\Explorer\Advanced
```

Right-click an empty area in the right-hand window, then choose "New -> DWORD (32-bit)," then "DisallowShaking."

Double-click the newly created entry, then adjust the "Value" box number to "1" and click OK. There will be no more tremors!
