

Replace “DisableNotificationCenter” with “DisableNotificationCenter.” The value data is set to “0” by default, indicating that the Action Center is turned on.

Change the Value Data by double-clicking on the newly formed value and entering “1” as the Value Data. To save the changes, click the “Ok” button.

In Windows 10, you’ve successfully disabled the Action Center. To see the changes, simply restart your computer.

As you can see, the Notification icon has vanished from the taskbar, and you no longer have access to it or the Action Center’s shortcuts to other choices.

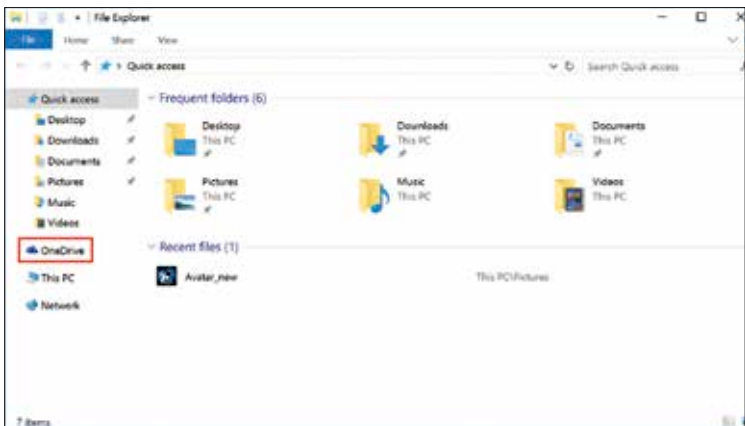

If you want to go back to the previous state, simply change the Value Data back to “0” or delete the newly formed value.

## Hide OneDrive from File Explorer

OneDrive is Microsoft’s most popular cloud storage service. It integrates with Windows 10, Microsoft Office, and Outlook to allow you to edit and move documents around in the cloud with ease. If you don’t utilise OneDrive, though, having a permanent shortcut in your File Explorer pane isn’t necessary. Fortunately, you can hide OneDrive from File Explorer in Windows 10 with a little tinkering in the registry editor. Continue reading to find out how.

Before making any changes to your registry, you should save a backup.

To begin, press the Winkey, type regedit in the Start menu search box, and then click “Registry Editor” in the search results.
