

In the registry editor, go to:

Computer\HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\
Control\Session Manager\Memory Management

Double-click “ClearPageFileAtShutDown” in the right-hand panel, then click “Memory Management.”

Restart the computer after changing its value to “1.” The pagefile is erased every time you turn off your computer. Don’t worry, it will be produced again if and when it is required. **d**
