

your machine's speed, according to registry cleansing software, however, this is not the case.

Fragmented registry

When software is uninstalled, upgraded, or updated, the registry might become fragmented.

System shutdown errors

Power cuts aren't uncommon and when it does happen, registry errors can creep in. A copy of the registry is stored in system memory each time your computer shuts down. It's possible that turning off, crashing, or dying your computer without going through the standard shutdown routine will cause problems in the future, but this is rare.

Malware

Malware attacks and modifies the registry in a variety of ways. Malware, in particular, is frequently intended to change the values of startup keys so that it is active each time the computer is restarted. Malware changes to the registry necessitate rapid notice.

Why even bother?

After a while of using the Windows OS — installing and uninstalling apps, swapping out keyboards and mice — you'll have hundreds or thousands

Changing hardware frequently can lead to a lot of unwanted registry entries from the add-on software
