

- Select a user account and log in when prompted.

The automatic repair process will begin. During this process, your computer may reboot.

## Restore using System File Checker

The System File Checker is another approach to repair a corrupted registry:

With administrator privileges, run cmd.exe.

Type “sfc /scannow” into the command prompt and hit Enter.

```
Administrator: Command Prompt
Microsoft Windows [Version 10.0.19044.1526]
(c) Microsoft Corporation. All rights reserved.
C:\Windows\system32>sfc /scannow

Beginning system scan. This process will take some time.

Beginning verification phase of system scan.
Verification 100% complete.

Windows Resource Protection found corrupt files and successfully repaired them.
For online repairs, details are included in the CBS log file located at
windir\logs\CBS\CBS.log. For example C:\Windows\logs\CBS\CBS.log. For offline
repairs, details are included in the log file provided by the /OFFLOGFILE flag.
C:\Windows\system32>
```

Wait until the scan is finished before rebooting if necessary.

## Restore by Resetting the PC

You may reset your PC in Windows 10 and keep all of your files. This option thoroughly refreshes your system files and may aid in registry restoration following a system crash. The steps are as follows:
