

- Select Update and Security from the Settings menu.
- Select Get Started and select Keep My Files from the Reset This PC option.
- After that, click Next twice more and then Finish.

Restore using the DISM Command

With administrator privileges, run cmd.exe. To do this, press the Windows Start key, type in “cmd” then press CTRL+SHIFT+ENTER. This will open up a prompt seeking administrator privileges to be given for opening the Command Prompt window.

Once the Command Prompt is open, execute the command below:

```
DISM /Online /Cleanup-Image /ScanHealth DISM /Online /  
Cleanup-Image /ScanHealth
```

Wait till the scanning process is finished.

Registry cleaning software

If you'd rather prefer to use a third-party software to fix registry issues, then head over to the next chapter where we cover some of the most popular third-party registry cleaners.
