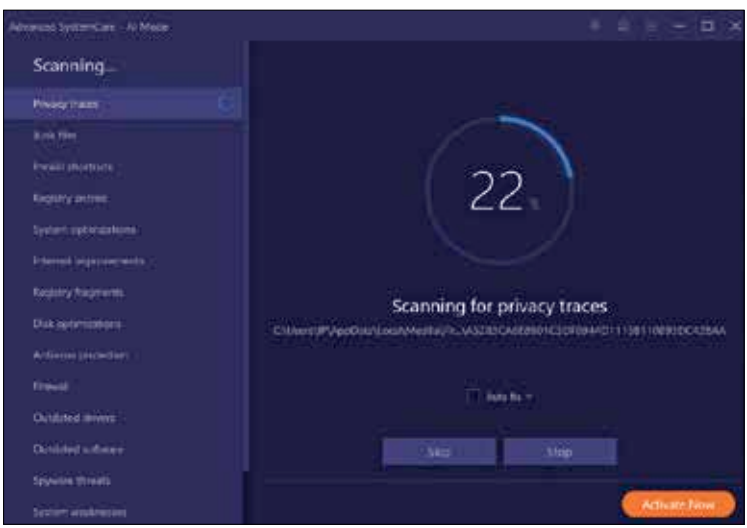
common add-on back in the Windows 98-XP era but it's a very outdated concept these days.

Another sore point about JetClean is the fact that JetClean doesn't have a portable version. You must "create" one from within your computer's installed version. At least the provision exists, and that should suffice for some users.

Windows 10, Windows 8, Windows 7, Windows Vista, Windows XP, and Windows 2000 are all supported by the JetClean registry cleaning in both 32-bit and 64-bit versions.

Advanced SystemCare Free

One of IObit's many freeware apps is Advanced SystemCare Free. It has a programme called Registry Clean that cleans the registry. Advanced SystemCare has been around for more than 15 years and it has served countless Windows users over this time.


The registry scan is very speedy. Advanced SystemCare is ideal for non-techies because of how the user interface is designed to be friendly for novice users. Furthermore, once the cleaning is complete, you can shut down or restart your computer, so you won't have to worry about it. This is good for scheduling the cleaning operation towards the end of the workday so that you get a speedy PC when you come back to work the next day.
