

Choose Manual Mode from the Care tab to start the registry cleaning process. Select All a few times to clear all the checkboxes, then Registry Clean, then SCAN. The Deep Clean option requires the program's professional edition.

Windows 11, Windows 10, Windows 8, Windows 7, Windows Vista, and Windows XP are all supported by Advanced SystemCare Free.

AML Registry Cleaner

AML is also one of those tools that have been around for a long time. If you've been a subscriber for a while then you've most certainly seen us include AML Registry Cleaner in the DVD and the e-DVD over the years.

The interface is a little "ancient," but AML Registry Cleaner makes up for it with a powerful registry search, a plethora of still-free extra utilities, and a track record of not mistakenly causing further problems.

The 64-bit and 32-bit versions of Windows 8, Windows 7, Windows Vista, and Windows XP are on the official list of supported operating systems.

PowerTools Lite

Maccraft, the authors of several famous Windows applications, has released PowerTools Lite, a freeware registry cleaning. PowerTools Lite is quick and detects about the same number of unnecessary registry entries as the other programmes in this section of the list.
