

releases because they're fixed (kali-linux-YYYY.N-vbox-ARCH.

Kali-linux-2022.1-vbox-amd64, for example.

We choose Linux as the "Type" option.

We'll use the x64 desktop image for "Version," thus we'll choose Debian (64-bit).

The next option is "Memory size," where we can specify how much RAM to use.

Again, the more RAM you have, the more applications you can run
