

How not to be a cybercrime victim

We've covered Ethical Hacking as a subject multiple times over in Digit, the FastTrack and on our web site. Usually, we write it in such a way that only the folks who're interested in donning the white hat would see any value in what's written. For everyone else, it's just additional gyan. While we've principally managed to keep the same approach with this FastTrack, we've deviated a little bit in making the content a lot more easier to digest. It's been simplified to the extent that even folks who have no experience with any pen-testing software should be able to take a crack at trying out some of the hacks mentioned in this book.

The reason why we've done this is because a lot more data breaches have been taking place as services get increasingly digitised. And in a developing country like ours, there isn't that much of a focus on educating the masses about the best security practices. We're changing that by doing our best to democratise this information. Also, some of us have read the Art of War by Sun Tzu and please bear with us while we quote the great strategist, "If you know the enemy and know yourself, you need not fear the result of a hundred battles. If you know yourself but not the enemy, for every victory gained you will also suffer a defeat. If you know neither the enemy nor yourself, you will succumb in every battle."

Essentially, we're letting you know how easy it is to perform some of the most commonly used tactics by those with malicious intentions. It could
