

```
• sudo sh -c 'echo "deb http://packages.ros.org/ros/ubuntu
$(lsb_release -sc) main" > /etc/apt/sources.list.d/ros-
latest.list'
```

Then you need to add the keys which will allow you to access the same.

```
• sudo apt-key adv --keyserver 'hkp://keyserver.ubuntu.
com:80' --recv-key C1CF6E31E6BADE8868B172B4F42ED6FBAB17C654
• Executing: /tmp/apt-key-gpghome.WudTyznLyJ/gpg.1.sh --key-
server hkp://keyserver.ubuntu.com:80 --recv-key C1CF6E31E-
6BADE8868B172B4F42ED6FBAB17C654
• gpg: key F42ED6FBAB17C654: public key "Open Robotics
<info@osrfoundation.org>" imported
• gpg: Total number processed: 1
• gpg: imported: 1
```

Once the packages are added, you will have to update them. Do that by typing in:

```
• sudo apt update
• Hit:1 http://eu-west-1.ec2.archive.ubuntu.com/ubuntu bionic
InRelease
• Hit:2 http://eu-west-1.ec2.archive.ubuntu.com/ubuntu
bionic-updates InRelease
• Hit:3 http://eu-west-1.ec2.archive.ubuntu.com/ubuntu
bionic-backports InRelease
• Get:4 http://security.ubuntu.com/ubuntu bionic-security
InRelease [88.7 kB]
• Get:5 http://packages.ros.org/ros/ubuntu bionic InRelease
[4669 B]
• Get:6 http://packages.ros.org/ros/ubuntu bionic/main amd64
Packages [569 kB]
• Fetched 662 kB in 2s (406 kB/s)
• Reading package lists... Done
• Building dependency tree
• Reading state information... Done
• 3 packages can be upgraded. Run 'apt list --upgradable'
to see them.
```

That should take care of making the packages available. Let's get on to installing the packages now.
