- Add distro "noetic"
- updated cache in `/home/ubuntu/.ros/rosdep/sources.cache`

Configuring environment

We have ROS and the dependencies manager installed. Let's configure our environment. This is a very important step, once we have it done, working with ROS will be smooth.

ROS is installed at `/opt/ros/<distro>` (in this case `/opt/ros/melodic`). In order to have ROS commands available, it's needed to source the shell file inside of the installation folder. This is done like the following:

- `source /opt/ros/melodic/setup.bash`
