

Other settings on this page can help you customise your taskbar experience. For example, you may alter which icons appears on the right side of your taskbar by expanding the Taskbar corner overflow setting.

If you have multiple monitors, you can change the taskbar behaviour on your second monitor by selecting Taskbar behaviours.

Keep it light and breezy!

5. Personalize Windows 11

Personalizing Windows 11 is the next step in

making it function better for you. Changing the desktop theme, adding a background image, or altering the transparency are all wonderful ways to personalise your laptop or computer's appearance.

Right-click on the desktop and choose Personalize from the drop-down menu that displays.

With themes, backgrounds, music, screensavers, mouse pointers, and more, you can completely customise your Windows 11 experience. To do so, click on any of the Personalization options and make the changes you want.

Simply go to Settings > Personalization to get started. Many elements, such as themes, backgrounds, lock screens, colours, fonts, and more, can be customised from here.

6. Check Privacy Settings

After you've finished installing Windows 11, double-check your privacy settings. Select Privacy from the Settings menu. You may manage the data that Windows 11 and other applications save here.

You should spend some time reviewing what's being shared because it has a lot of potential benefits. Any settings that don't relate to you or that you don't want to share should be disabled.

7. Check Power Settings

To get the best performance out of your laptop or computer, tweak the power settings and customise Windows 11. Battery Saver, Sleep Mode, and other options may be available.
