There's still 1 per cent battery left

8. Back-up PC

After you've installed Windows 11, the most crucial thing you can do is make a backup of your personal stuff. Now is the moment to establish a system backup routine if you don't already have one.

It's vital to back up your computer before making a mistake. In the event of a system breakdown, you can utilise Windows 11's system restore tool to restore your system. Instead of restarting the computer, build a system image for recovery.

9. Make sure Antivirus is activated and running

You should immediately activate your antivirus programme after installing Windows 11. Although Microsoft Security Essentials is free with Windows 10, some users prefer third-party security software. This is an important step since you want to ensure that your computer is free of viruses and other security issues.

10. Check for updates

Because Microsoft is continually updating its products, it's critical to keep
