

a variety of play settings and functions. Whatever your requirements are, you'll be able to get one for your computer.

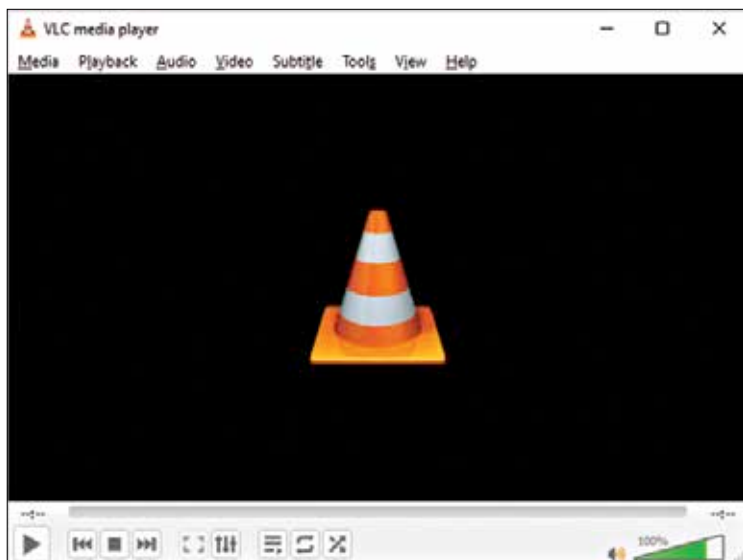

Our current favourite is the open-source VLC Media Player. But that isn't the only one to think about. We've compiled a list of our top five picks listing out what makes them unique so you can choose the one that best suits your needs.

VLC Media Player

If you're looking for a free video player that can handle whatever video you throw at it, VLC Media Player is the way to go. This software can play 360-degree videos, movies and clips with resolutions up to 8K, and compressed video files.

This free movie player also comes with a plethora of features and controls. You can adjust your video settings to improve the playback or audio quality and apply filters to specific clips to change their appearance. VLC Media Player also supports synchronous subtitles, which might come in handy while watching movies without sound.

The one major drawback of VLC Media Player is that many of its tools are hidden in the menu options. Accessing and using some of the more
