

complex functions requires some digging around. VLC is also a potent music player .

GOM Player

For playing back videos, GOM Player has a lot of advanced features. The software supports 360-degree and 8K videos, and has the ability to watch YouTube videos straight from the app. The video playback settings aren't as extensive as those found in others, but they're far easier to use when you're just getting started.

It is one of the best free video players available since it not only contains a large number of codecs, but it also has a searchable codec library that allows you to play almost any sort of file. You can use synchronous subtitles with the player, and even import complete playlists using file types such as *.pls or *.asx.

GOM Player now supports screencast. Thus allowing you to play on a larger screen by connecting your computer to a television or projector.

Now with 360 degree VR playback!

5KPlayer

5KPlayer is one of the more comprehensive free solutions for not just watching videos but also managing them. You can upload your whole computer video library to the software. This allows you to choose videos
