

AIMP

AIMP, like many other music players listed here, makes organising your music simple. In AIMP, a library can be constructed from files in different locations and ripped from CDs, with track numbering and tag filling done automatically to assist you get it in shape.

Hardbass.mp3

Additional encoders can be added as user-created add-ons to AIMP, which supports a large number of formats. AIMP has an alarm clock function that starts playing at a specific time, a wind-down setting that shuts down your PC at the end of a playlist, and a voice eliminator for generating your own karaoke recordings. This isn't as feature-rich as MusicBee, but its intelligent design and carefully curated feature set win it a solid second position.

foobar2000

With capabilities like batch processing, automatic metadata completion and track numbering, and copying & pasting data between fields, foobar2000 makes cleaning up a chaotic collection a breeze.

When you rip an audio CD, this music player will seek for metadata for untagged tracks and can locate and delete redundant tracks. Although
