

software. The presence of a firewall, on the other hand, is unique to this programme. The bulk of antivirus software, such as Windows Defender's firewall, rely on your computer's own firewall, but ZoneAlarm goes a step further.

The ZoneAlarm firewall is fully programmable, allowing you to block public server and VPN protocols. It also has the ability to filter IP traffic and provide ARP protection. You can customise scan modes with the firewall to meet your specific requirements.

The firewall can be set up to safeguard your local network as well as monitor all programmes. Other features include a Gamer Mode that, like Panda Antivirus, blocks

alerts, as well as the ability to back up and restore its settings at a later time.

It even provides Identity Protection Services to safeguard your information from unscrupulous actors and preserve your identity. However, this feature is only available to residents of the United States.

Windows Defender

It's worth noting that Windows Defender and its overall security are actually rather good. Because the majority of the native programmes on Windows 11 are mediocre at best, most consumers opt for a third-party alternative.

Defender defies the norm by providing real-time protection and a comprehensive set of security capabilities. It features excellent firewall and network security. The app will keep you up to date on system performance on a regular basis.

It receives frequent updates, so you'll never be behind on security, and it's light on the CPU. It has never been and will never be a resource hog.

Defender SmartScreen, for example, safeguards your Windows 11 computer from malicious files, websites, and downloads. There are family solutions for keeping track of children's and other devices' online behaviour. It accomplishes a lot of the same things as third-party apps for a base
