

versatile. Things are a little gamified here. While using the app, you're trying to stay on the 'yellow brick path,' which implies you're reaching your targets, at least on average.

Anything that can be plotted on a graph may be tracked, including the number of words written, hours worked, and contracts signed, and staying inside the golden zone can be quite motivating. If you're ready to completely commit, you can add your credit card information to your account so that you can be fined if you don't stay on track. Beeminder isn't for everyone, but it's so different that it's worth a go to see whether it works for you.

Clockify

Clockify takes the concept of shift clocking on and off and runs with it. It's a pretty simple tool, but that's exactly what will appeal to people.

Keeps the clock ticking and you on your toes

This is just a timer that allows you to conveniently track how much time you spend working on various projects. Just start the timers, add labels, descriptions, and project information. Then stop them when you're finished. You can set timers to start as soon as your browser opens, eliminating the need to remember to do so.

Clockify interacts with Trello, Asana, Jira, Todoist, and other apps, and you can get detailed data and breakdowns of how you spent your time. You'll be happy to know that there's a browser extension for Chrome and Firefox that does just that. Mobile apps and desktop versions for macOS, Windows, and Linux are also available.
