

Start11

Stardock's Start11 is a customisation tool that returns users to their favourite aspects of Windows. The Start menu in Windows 11 was certainly the most major update. But, Start11 allows you to replace it with classic Start menu layouts from Windows 7, 8, and even 10. Alternatively, you can go with a more modern take on the conventional Start menus.

Not only that, but Start11 also allows you to bring everything you liked about the Taskbar to Windows 11. This includes the ability to move the Taskbar to the top or bottom of the screen, change the colour, blur, and transparency of the Taskbar, and even bring back the traditional Taskbar context menu. You may even change the spacing of grid icons to fit your specific workflow.

RoundedTB

RoundedTB is a fantastic Windows 11 customization tool, and new upgrades have made it even better. The software focuses on customising the Taskbar by allowing users to add rounded corners, margin space, and divide it into multiple pieces for a more appealing Taskbar.

We're running round and round

RoundedTB has been present since Windows 10, but the most recent changes make it feel more natural in some instances. The nicest part about RoundedTB is that it's free on the Microsoft Store and doesn't require any permanent system adjustments or system file modifications.
