TaskbarMeters

Taskbar Meters is a collection of programmes that lets you keep track of your computer's resources. There are three different applications to choose from, and they all work in the same way.

Each application will appear in your Taskbar and show you how much of your resources are being used.

Accurate to the t

Every application is designed to change the colour of its icon in the Taskbar, so you'll be able to tell if you're using too many resources.

You can monitor your CPU, RAM, and disc utilisation using these tools, which is more than adequate for most people. You can change the colours or the frequency of each tool if you wish.

We should point you that these apps employ a simple way to display your system's resource utilisation.

Unfortunately, you won't be able to see the actual figures if you use this method, which may be a drawback for certain users.

These tools' only shortcoming is their inability to display extensive information about CPU, RAM, or disc usage, which may deter some users. **d**
