

automatically. The users of the Firefox browser don't find it difficult to use as the user experience remains the same from the old days. However, security updates keep coming in the background. Another important feature is hidden or private browsing mode. It also allows multiple extensions to be active at the same time. Mozilla allegedly doesn't send private data of users to its servers or any third-party partners. This program also has features like tracking protection to make sure that websites don't track the users' online activities.

Chromium

Chromium is one of the open-source projects that underpins Google's Chrome browser. Since Chromium is open-source, many other web browsers including Chrome have been built from its source code. All the extensions of Chrome are compatible with this browser. This browser also doesn't prevent the user from using third-party extensions. Chromium tracks the details mentioned in the address bar or search engine by default before sending the queries to the desired search engine. This helps in keeping account of whatever data and cookies are being downloaded while the web browser is used so the user can recollect the necessary stuff when needed.

Why you must get it:

The main purpose of the Chromium browser is that it provides a source code to everyone, therefore even beginners in web page programming can use Chromium easily and create one for themselves. This feature allows Google
