

to fetch ideas from third-party sources and iterate on these received inputs very quickly. Due to this, several new builds of the Chromium software are being released every single day. This helps in fixing the problem regarding privacy as not all data is collected by Google. It works well on all Google extensions without any intrusion thus developers love to use this browser.

Midori

Midori is an open-source web browser that mainly focuses on having a lesser load on the hardware than all many web browsers along a ton of features. This browser commits to providing a completely anonymous and secure private navigation as many developers feel like anonymity is an extremely important feature to have. This browser is developed using Web kit, GTK, and rewritten in Vala. Even though the development process of this browser was stalled for almost 2 years, it regained its old popularity and reputation.

Why you must get it:

Most people think Midori might not support popular web pages as it is a small and light web browser, but it provides higher protection while searching such popular websites as malware threats will be prone in the place where most users visit. This browser is fast and uses a majority of the latest web technologies and provides an array of extensions with all essential features too. As this is open-source and available for free, anyone can modify and add diverse feature sets as per their needs.

Qupzilla

Qupzilla is an open-source browser for personal computers and is available in both installable and portable versions. This runs on the same Webkit engine layout as other popular browsers, like Chrome, and understandably has some noticeable similarities. The user interface is designed in a way that anyone can easily understand how it works and get access information they need. The developer designed this software to be lightweight and multi-platform with design and technical cues from Firefox and Chrome.

Why you must get it:

The major advantage to choose this browser for a Windows or Linux systems are its preinstalled features like ad-block, download manager, and more. Another reason why this browser is popular, is its performance across
