

Video Players

MPV

MPV is an open-source, cross-platform video player that is designed with a minimalist, graphical user interface and has rich features on the command line version. It features a minimalistic approach which makes using it easy for even beginners. This is basically designed to work on popular and common operating systems like Windows, Android, and Linux and it works on the Ubuntu operating system as well. MPV is a powerful video player as it has the ability to play videos from the GNOME shell desktop too.

Why you must get it:

MPV is considered to be a clean yet powerful video player. Displaying DVD menus, casting content to a Chromecast, etc. are some of the media handling features of this video player. MPV has its own salient features like improving the picture and sound quality to the maximum possible resolution. It sports a minimalistic GUI with few necessary controls and video codecs support.
