

Why you must get it?

Sylpheed has all the features that one expects in an email client. The easy user interface, amazing message templates with cool colour labels, the bogofilter spam filtration, X-face feature, TLS/SSL security, and PGP encryption, make it more reliable, safe, and easy to use for businesses.

Zimbra

Zimbra is an elegantly styled open-source email client software through which you get access to all of your email accounts on one screen. It is flexible between devices so that you can synchronise your emails, calendar data, contacts and locally stored data on the device. If you are running an organisation and finding it difficult to communicate between your teams then Zimbra is the right solution as this application offers simple, cheap and time-efficient email solutions. An additional feature is you can send the invitations for meetings to your team. It also offers file sharing between users.

Why you must get it:

With Zimbra, you can efficiently manage all your email IDs with shared calendars, shared address books, and anti-spam technology. You can collaborate with your team, and send conferences and meeting invitations. The unique feature of Zimbra is that you can work with any device and synchronise between your devices so that you can work from anywhere seamlessly. You can attach large files up to 25MB to your emails, which is not available with many email application providers. The search option in Zimbra is very effective and it allows you to get the desired content easily.

Geary

Geary, a new IMAP email client application with a low-key interface design, offers fast and responsive service. It supports Gmail, Yahoo Mail, Outlook.com, and popular IMAP servers. It provides just email services, yet manages to fare pretty well for itself. It is a fast and flexible application for Gmail users. All the email messages are stored in one file and hence by copying one file you can transfer the offline mail content to a different PC. It isn't very customisable but it's handy with the available options.

Why you must get it:

With a modern and straightforward interface, setting up Geary is so simple that you can complete it in just three steps. Unlike other applications,
