

Anti Virus

Armadito:

Armadito is an antivirus software that protects your systems and the servers from any kind of malware and viruses. It includes classical signature-based malware detection and provides innovative problem-solving detection modules for files stored in your computers running on operating systems like Windows and Linux, including PDF documents. It can also be used remotely from anywhere with an intuitive interface and gives users free access to most of the features. From Trojans to malware, it hunts down everything. Armadito provides a comprehensive graphical user interface to trigger actions like malware detection, launch scan, and viewing statistics and journals. A central administration console, integrated as a GLPi plugin, allows a system administrator to manage all the installed software, view alerts, launch remote scans, and deploy configuration or bases.

Why you must get it:

Armadito is easy to use, faster, simple, and effective. It also is a multi-
