

Do more, pay nothing

Why pay for software when you can
have the same or more for free?

To get the most out of this Fast Track, you must comprehend what the term open-source actually means. ‘Open-source’ software are freely available to download, edit, use and share, with absolutely no copyright restrictions. Different types of open-source licenses provide users with varying degrees of freedom. However, the primary goal of open-source is to encourage experimentation, knowledge-sharing and collaboration.

Microsoft has often been on the receiving end of criticism from the Linux community owing to its closed-source nature. However, Windows OS still singlehandedly outshines the popularity of all the Linux distros combined. The company was an advocate of proprietary software for a long time, but in the last couple of years, Redmond has increasingly contributed to the open-source community. Microsoft is now a member of the Linux Foundation and a regular contributor on Github. It currently owns Github. Other major software companies have also become active members of the open-source community. This equates to more and more open-source applications and software being created to cater to the needs
