

Content Management Systems

WordPress

WordPress is a free content management software based on PHP and MySQL. It is an extremely popular and widely used Content Management System (CMS) for websites. WordPress began as a blogging platform in the year 2003 and has since evolved to become a full-fledged CMS.

Why you must get it:

It is free to install, upgrade and deploy. There are thousands of plugins and templates and it's flexible with a simple interface. It can reduce develop-
