

same task or function over and over. It is a free and open source CMS and is rapidly gaining popularity for its sensible design and ease of use. Django's framework will let you design your domain and code classes before you know it.

Why you must get it:

Django is one of the first frameworks that respond to the new exposure. It is the core team that usually alerts the other frameworks of the patches. It is a feature-rich CMS and has the best practices for SEO as well.

OpenCMS

OpenCMS is a professional-level, open-source website content management system. Coded in Javascript, OpenCMS is distributed by Alkacon software under LGPL. This CMS needs an ISP Servlet container like Apache Tomcat. OpenCMS prioritises working environment, workflow management, user management, WYSIWYG, content versioning, internalisation support and many other features that include the request proxies to another endpoint.

Why you must get it:

OpenCMS allows system access from any location via web browsers. It has good security with a strong encryption (like HTTP protocols) for login, when
