

provides a feature of using open PGP keys to sign the PDF documents. To have this feature, GPG software needs to be installed so that keys can be generated. The file formats of this software are compatible with Microsoft Office. Unfortunately, insufficient real-time collaboration support and integrated cloud storage are some problems in the software.

Apache OpenOffice

Apache OpenOffice has been in existence for over 20 years now, and has been fuelled by community-led development. This software is considered to be one of the world's largest open-source platforms. The greatest feature present in Apache OpenOffice is an open productivity suite for the office. This software is even considered to be an alternative for Google Docs, Slides and Sheets. Open office perfectly works with DOCX, XLS, XML, PPT and other formats.

Why you must get it:

Applications in Apache OpenOffice, like spreadsheets, word processors, drawings, presentation graphics, equation editors and databases are deemed to be quite productive. OpenOffice provides you with the ability to export PDF files from Word, Excel and Powerpoint. The integration of OneDrive and Outlook will help in sharing work and files easily. The software connects with extension programs like Google Drive and DropBox. However, features like email support, cloud storage and mobile applications are missing in this software.
