

of multiple types of people, organisations and businesses. Since they are open-source, companies often tend to feel, “Why pay for software when you can have the same or more for free?” The efforts to develop more open-source software are great for individual users too, and the same philosophy applies to them.

In this Fast Track, we attempt to bring you some of the best open-source software and applications that work across various platforms like Windows, Linux, macOS and more. Most of these apps or software are free, while some are freemium. We have created a comprehensive list of open-source software across various domains such as photo editing, anti-virus, customer relationship management, bug tracking, games, data recovery, and much more. You can also discover viable alternatives to popular apps such as Gmail, Photoshop, Premiere Pro and others by reading through our list of open-source software. After reading this list, we’re sure you will not have to pay for software ever again since most of the software and applications in this list work as well, or better, than their paid counterparts across all the mentioned domains. It’s all about getting things done for free, with the recession looming on our heads. **d**
