

track playing features along with multiple mixing of audio at the same time and has a record on tempo ramping too. Lua scripting from this software allows the user to make it their own by adding new features with manual scripts. It has integrated side chaining and pin connection points as well. Even the inline plugin display is merged in the same working window. This application enables the user to create non-destructive, non-linear editing with unlimited undo and redo options throughout the editing sessions. This has the best working mode with overlapping regions, and transparent and opaque regions.

Qtractor

Qtractor is a free and open-source audio editor/digital audio workstation. It is fast, lightweight, and small enough to even fit on old floppy disks. This application works only on the Linux OS though. It is also famous for its multi-track audio playing capability along with MIDI recording and editing. The source code of this software is written in C++ and uses a common QT toolkit for enhancing its graphical user interface, making it so user-friendly in nature. So users can access all options within the working window. This software depends on Advanced Linux Sound Architecture (ALSA) and Jack Audio Connection Kit (JACK).
